Double 10,1" rack mounted screen

During a production you can't have enough screen estate. Having multiple screens ensures you that everything is working as it should behave. However, your production desk always lacks space. Therefore Datavideo has developed the **TLM-102**, multi function 10,1" rack mounted screen.

Datavideo has developed the **TLM-102** as a multi function unit. This screen isn't just a slick and crisp screen that accepts signal in HDMI and SDI, it's also a waveform vectorscope and audio monitor. **TLM-102** accepts signals up to 1080p60.

Both HDMI and SDI inputs have a loop through output, to save valuable outputs on your switchers or signal distributors. The **TLM-102** also contains an audio monitor which comes in handy when monitoring embedded audio.

Both screens can be fine-tuned to perfection using the on screen menu. With extensive control over brightness, contrast, saturation and backlight you make sure that the screens reflect your production as close to reality.

Using the waveform vectorscope makes shading your field cameras a breeze. **TLM-102** combines perfectly with Datavideo's extensive range in camera control solutions and all-in-one cable.

Come and see **TLM-102** on the IBC 2017 show. For more information please visit our website www.datavideo.com

TLM-102

High quality 10,1" panels
HDMI and SDI input & Loop through
Built in vectorscope & audio monitor
